Global Electricity Breakthrough - Green source of electricity everywhere! Captured from flow movement within Oceans, Rivers, & Canals.

A NEW ERA for PROVEN - CLEAN - MEGA (limitless) ENERGY

Miami, FL & New Iberia, LA – 71 % of our planet is covered in extremely slow moving water. The kinetic energy from even the slowest moving water is 830 times more powerful than wind. [Waterotor Energy Technologies Inc.](#) based in Ottawa, Canada and Louisiana, USA has completed 10 years of testing and is ready for the world. This breakthrough technology is scalable, from specifically small Waterotor systems to giant ocean floating systems.

Waterotor is about to change the world's reliance on fossil fuels. Proven to consistently capture more than half of the available energy in water flow, even at speeds as slow as 1 mph. The global landscape is immense for this technology as it has the capability to substantially lead the current production of renewable energy on our planet. The company is expanding its technology base for major global manufacturers and power companies patented in over 110 countries to provide low cost electricity.

Fred Ferguson, Waterotor CEO, Founder & Inventor, will be presenting on stage March 1st at 12:30 PM at the [Natural Disaster Expo](#) in Miami, FL. He will also be available at the Waterotor booth March 1-2, 2023, for the duration of Expo. Mr. Ferguson and his team will be showcasing how over \$25 Million in privately funded research, including location tests and demonstrations, is leading to changing the world's electricity power landscape.

This worldwide patented technology, utilizes novel, slow rolling, drum-like, submerged rotors to capture water speed energy conversion. Creating power to supplement not only villages and communities, but the power grids of entire countries.

“Waterotor’s technology provides access to a massive, untouched source of renewable energy for the first time in history,” said Fred Ferguson. No one has successfully commercialized energy production from flat moving water until now, which brings us to begin a new era of renewable energy.”
